Indeed, it does. A correctly fitting bike will help you to go further for longer. Choosing the right sized bike depends on the type of the

bike, your height, the inside leg measurement and your riding style. But it is not as complicated as it sounds.

The most important criteria that determines the size of your bike is your height. If you find that you're between sizes or you're unsure of which of two frame sizes would suit you best then the other factor that can be considered is your reach.

The reach will affect your riding position quite significantly. You should not feel like you're sitting too straight with your arms bent too much, neither leaning forward trying to grasp the handlebar.

If your sitting height is higher than average, then the larger of the two frame sizes is recommended and vice versa.
